Abstract of the Disclosure

SPORTS FLOOR PARTICULARLY FOR GYMNASIUMS

This A floor is ~~remarkable in that the~~ composed of a plurality of modular elements comprises a first subassembly consisting ~~in the association~~ of a base component (A) and a first intermediate element (~~B~~) and a second subassembly consisting ~~in~~ of a second intermediate element (C) and a top component (~~D~~) forming ~~the~~ a point elastic floor[[,]] The ~~the~~ two subassemblies (S1-S2) ~~being~~ are secured together by connecting means with an angular orientation offset such as to define the contact surfaces (~~13~~) and allow assembly by interlocking[[,]] ~~and in that the~~ The intermediate elements (~~B-C~~) are disposed with a median honeycomb structure (6) sandwiched between two stiffening plates (7-8) of the same format and dimension, ~~said~~ The plates ~~being~~ are of nonwoven material and ~~have~~ having means of reinforcement and stiffening ~~and in that the plates have means of reinforcement~~ disposed in a canvass of warp and weft threads.
